Dr. Joshua Lederberg
Department of Genetics
Stanford University School of Medicine
Palo Alto, California 94304.

Dear Dr. Lederberg:

Thanks for writing the excellent article for the Washington Post on the Jensen contribution to the Harvard Educational Review. This study of Jensen's I think is phenomenally sensible and worthwhile.

I do not know how much interest you have in our recent armadillo work. I am sending you herewith an article which with slight modifications is to be published in the American Scientist this Spring.

I noted with particular interest your strong comment about nutrition. You may already have a copy but I am sending you a paperback NUTRITION IN A NUTSHELL which gives a broader view of the subject than is usually presented.

Sincerely yours,

Roger J. Williams

Thank you very much. Yes I had been interested in your paper in NAS to the point of looking for any literature on armadillo genetics, quite unsuccessfully. Is there any genetic correlation of the monozygosis of the litter? Is it strictly uniaxial? Random or successive litters?

Sincerely,
Have you seen John Chamberlain's paper on differences in human twins? John Chamberlain
